

5th Anniversary of Rohrer Tools AG

The best birthday present is often the one you give yourself...

In 2024, we continued to invest in the optimization and modernization of our production machinery.

Just in time for our 5th birthday, Hedelius delivered a new CNC milling center, the Forte 9.

Following the sectors of surface and jig grinding, we are now successively modernizing the CNC milling sector. Our corporate aim is to continue to manufacture the most important key components in-house to the highest quality at optimized costs. This will also ensure the recognized quality and availability of our tool systems in the future.

Commissioning and training - our milling team is looking forward to starting work with the new machine

We will keep up the continuous optimization of our production
in the coming 2025 financial year.
